We also undertake many soft landscaping tasks including;
Boardwalks
Log Walling
Decking
Planting Schemes

Industry Sectors:
Construction

Policy Statement

As a company we recognise that our operations have an effect on not only our local but also our regional and global environments, as a consequence of this the management are committed to continuous improvements in environmental performance and the prevention of pollution.

As a company we will always strive to meet or exceed all applicable Environmental regulations, laws and codes of practice and implement such policies through a coordinated environmental management system.

The company will use environmentally safe and sustainable energy resources to meet our needs. We will invest in improved energy efficiency of products that we both use and sell. The company considers the environmental impacts of all its products at all stages of their life cycle – from design, to manufacturing, customer use, and finally disposal. We will seek to address this through the adoption of a sustainable procurement policy. We will conserve resources through efficient use and careful planning.

The company maintains that a primary part of its corporate environmental strategy is sustainable waste management and as such recognises its responsibilities to recycle materials wherever possible. We will minimise waste, especially hazardous waste and dispose of all waste through safe and responsible methods. We will work with our suppliers to ensure they recognise and reduce the environmental impact of their products and transportation and wherever possible maintain a consistent supply structure.

Through coordinating route planning and delivery schedules this company seeks to realize the dual benefits of reduced fuel consumption and lower exhaust emissions. We are also committed to reducing emissions through industrial processes. The company will implement our policies through guidelines and training seeking to achieve all set environmental targets and goals designed to improve our environmental performance. We will conduct annual self-evaluation of our performance in implementing these principles and in complying with all applicable laws and regulations.

Storage

All hazardous materials such as paint, oil, fuel and gas will be stored in the appropriate adopted locations and secured in the recommended facilities. These areas will also be fitted with spill kits so that in the event of an accident the problem will be resolved in a quick and efficient manner.

Waste

All waste will be kept to an absolute minimum but in the event of non-recyclable waste being created this will be stored in the relevant waste bays and disposed of in a safe and responsible manner in line with current regulations and guidelines.

Vehicles

Journeys are to be coordinated with the view of minimising fuel consumption and vehicle emissions, where possible the volume of vehicles travelling will be kept to a minimum and all vehicles will be regularly tested in accordance with VOSA regulations and guidelines.

Communication

With the adoption of this policy regular meetings and channels of communication will be formed so that all environmental issues can be effectively evaluated and dealt with. All changes to the policy will be expressed through company memo and records of which will be kept on personal file.

Reviews

Annual reviews will be conducted by management to assess whether the terms of this policy have been met and also the efficiency of performance with the aim of evolving to suit the needs and demands of the company.

Other important Environmental information

We are registered under the Environmental Agency Certificate of Registration under the Control of Pollution (Amendment) Act 1989
Registration Number CB/FN5411AR
